Surface Preparation and Application:

After Preparation of Base, Apply a thin base coat of Pearl Emulsion by brush or roller. Once the surface is ready, apply a coat of Pearl Emulsion diluted by 10-40% with water, depending on the level of opacity you want to achieve in wide strokes with a steel spatula or Roller until the surface is completely covered. Wait 4-6 hours and apply a second coat, then "draw" the desired effect by short-bristle brush with crossed or circular strokes, by a sea sponge, hair glove, cloth, pad or rog roller before its dry completely. It can also be applied by trowel, using the product undiluted. The overlaying of several coats of matching or contrasting colors can give extremely interesting and attractive decorative effects.
